

## Analysis of options for improving nukeSPAM and RNYA

2017-02-26 10:27:14 by kguske

It's been a while, but we haven't stopped looking for ways to help websites expand their reach and operate more efficiently. Since member management continues to be a challenge, especially with the continued onslaught of spammers, the current focus for nukeSEO is on these areas.

Your feedback in the forums will help determine priorities. Please add comments [here](#), where you'll also find more detailed discussion on these topics.

Currently, we're looking to:

- RNYA
  - Replace the grid, search and maintenance functions with the DataTables class used in nukeSPAM
  - Add functions to delete users without notification and add domain / subdomain to the blocked mail domains list
  - Share blocked mail domains list across sites
  - Add tools for removing members who never logged in, identifying members from blocked domains
- nukeSPAM
  - Integrate nukeSPAM with RNYA for simplified domain blocking (e.g. add this domain / subdomain to the blocked domains list)
  - Integrate nukeSPAM with additional blocking tools for:
    - Email validation services
    - Disposable Email Address lists / services
  - Auto-block domains / subdomains with multiple offenders

Please let us know what you think at [RavenPHPScripts.com](https://RavenPHPScripts.com).
